Summary

Software Development Engineer with **3+ years** of experience designing, developing, and delivering scalable software across backend systems and full-stack applications. Strong foundation in **system design, data structures, algorithms, and software engineering principles**, with a focus on building reliable and maintainable solutions.

Experience

Amazon — Jun 2025 – Present

Software Development Engineer — *Pune, Maharashtra*

- Authored **4 technical design documents** for Alexa voice-SDK modernization and led implementation across calling/messaging decoupling, Bluetooth accessory event and latency migration, and smart-glasses camera integration; drove architectural changes across multiple packages.
- Owned cross-account **DynamoDB data migration** and regional enablement of an Alexa backend service on AWS, implementing replication, KMS-backed encryption, region-scoped IAM policies, and OpenSearch infrastructure; codified infrastructure changes and enabled staged routing in gamma and production.
- Delivered **11 production reliability improvements** across a **Java** service and **TypeScript AWS CDK** infrastructure, hardening host validation and warm-up health checks and wiring high-severity alarms into automated deployment rollback.
- Migrated Bluetooth-accessory speech events and latency reporting to the next-generation voice SDK, implementing a shared state center, source router, serial-queue event fan-out, and dialog-ID correlation to maintain event ordering and lifecycle consistency across legacy and new SDK paths.
- Developed an internal **Python-based Alexa Log Analyzer** to surface relevant errors from application logs, streamlining production troubleshooting and helping engineers debug failures faster.

Barclays — Jul 2023 – May 2025

Software Engineer — *Pune, Maharashtra*

- Delivered **15+ production features** for Oracle Watchlist Screening, a critical compliance platform serving **48M+ customers**, improving reliability of financial-crime detection workflows.
- Automated build generation and deployment workflows, reducing **deployment errors by 50%** and improving release reliability and production stability.
- Modernized screening workflows through Autosys job orchestration, REST API migration, and integration of machine-learning models.

Education

Vishwakarma Institute of Technology, Pune — Aug 2019 – May 2023

Bachelor of Computer Engineering - 9.07/10 — *Pune, Maharashtra*

Projects

Coding Classroom — Jan 2021 – Present

Flask, Python, SQL, Render, Piston

- Built an online coding assignment platform used by **3K+ users**, enabling teachers to create, distribute, and automatically grade programming assignments with real-time feedback.
- Designed a sandboxed code-execution backend supporting C, C++, Python, and JavaScript, using process isolation to handle concurrent submissions.

Technical Skills

Languages: C++, Java, Python, Swift, TypeScript, SQL
Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS
Backend & APIs: Microservices, REST APIs, API Design & Versioning, Distributed Systems, Asynchronous Processing
Frameworks: Node.js, React.js, FastAPI, Flask
Databases: PostgreSQL, MySQL, MongoDB
Cloud & Infrastructure: AWS (DynamoDB, Lambda, ECS, OpenSearch, IAM, KMS), CloudFormation, AWS CDK, Observability, CI/CD
Engineering: System Design, Concurrency, Scalability, Reliability, Fault Tolerance, Design Patterns, Unit & Integration Testing, Docker, Git, Linux
AI: LLMs, AI Agents, Agentic Workflows, MCP, AI-Assisted Development (Claude, Codex)

Achievements

Competitive Programming: CodeChef 5 Star, Codeforces Specialist, LeetCode Knight (Top 2%)
Global Rank 51 & 76 – Credit Suisse Global Coding Challenge; Rank 649 – Google Kickstart (110K+ participants)
